

Brian Wigginton is a Digital Technology professional specializing in the development and implementation of safety solutions. With 15 years of experience in the industry, he is now managing a technical development and implementation team at the National Railroad Passenger Corporation, Amtrak. Brian specializes in translating business requirements to technical specifications, designing a solution, and delivering the solution to stakeholders. He focuses not only on the technology, but getting to understand how technology impacts the users daily to assist in optimizing workflows, troubleshooting issues, and explaining technical details to the everyday user. Brian serves as the Senior Manager of Design & Development at Amtrak and his team currently serve as technical leads for the implementation and development of an extensive portfolio, delivering solutions for Police, Safety, and Security users within Amtrak, many of those solutions, impacting more than 20,000 employees company wide.
